

ANALYSE NYSE DATA FOR HEALTH CARE DISTRIBUTORS AND SECTORS FOR FOUR CONSECUTIVE YEARS

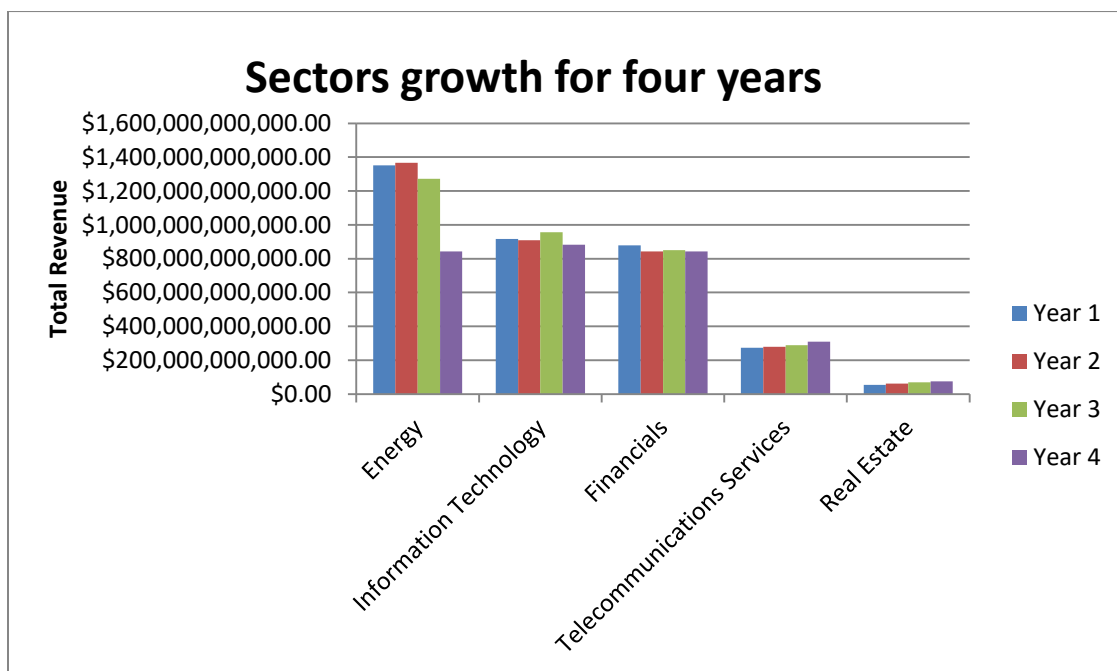

Performance of selected sectors for four years in a row

From the chart below and the excel sheet attached with this report:

The energy sector has seen a drastic decline from 1% last year to 51% in year four. It has a standard deviation of 246 billion and a range of 522 billion due to its market value. It has a mean growth rate of 19%. This shows that the energy sector has not been doing well for the past four years.

Real estate has a mean growth rate of 10% and telecommunication services have a mean growth rate of 4%. These two sectors have been doing well in the past four years. The deviation for both sectors is 8 billion for real estate and 16 billion for telecommunication services. They have a range of 19 billion for real estate and 37 billion for telecommunication services. These sectors are a good starting point for investment because they have the potential to grow bigger in the future.

The financial and information technology sectors have a stable growth rate with a mean growth rate of 1% for both sectors and a deviation of 16 billion and 30 billion for each sector, respectively. Which shows that the sectors' growth has not drastically changed for the past four years as depicted in the chart below.

Healthcare distributors' revenue rate for the last four consecutive years

From this column chart of earnings of healthcare distributors from year one to year four:

We can quickly see that BMY and HSIC are not generating enough revenue for the sectors. BMY generated the highest revenue of 17 billion with a 1 billion range and a deviation of 732 million, while HSIC generated 10 billion in revenue and a range of 1 billion and 772 million deviation, respectively. From the chart below, the BMY has been underperforming with a mean growth rate of 2%, while HSIC improved with a mean growth rate of 6%.

MCK posted the highest revenue of 190 billion in year four and is the highest in the plot. It has a mean growth rate of 14% and has the highest deviation at 32 billion because of its market dominance.

CAH is the other health sector with a high revenue return. The lowest revenue is 91 billion in year 2 and greater than the sum of all the four years in BMY and likewise in HSIC. It has a mean growth rate of 5% and a standard deviation of 12 billion due to its market value.

The highest range of revenue for the healthcare distributors was in year four, with 180 billion, and the lowest range of revenue was 113 billion in year one.
